### **Operational Review**

RMG Limited (RMG or Company) has fully completed its exploration activities in 2018, the field exploration program has been conducted during second half of 2018 on the Tuina property, and the program was composed of a surface geological mapping with a scale of 1:2,000 covering an area of 9 square kilometers, surface rock chip sampling, trenching and channel sampling, IP geophysical survey on five target zones in La Teca and Santa Rosa areas. The Company released the surface sampling assay results on 31 January 2019.

The principal objective of the work was to get more understanding to the copper mineralization in the Tuina copper property, recommending further exploration work and to delineate the drilling targets within the property.

The Company engaged Vancouver based independent mining consulting firm, C2 Mining International Corp (C2) to provide geological services to the recent programs at the Tuina Project. C2 is charged with providing a technical report to JORC standard on the program and it currently being finalized.

The Tuina Project is an exploration stage project which contains two immediate areas of interest, Santa Rosa Project and La Teca Project, which has, and is surrounded by numerous Manto style deposits which have been successfully historically mined. Santa Rosa itself was previously mined for copper oxide ore.
